

Evaluation of Visual Basic 5.0 as an Object-Oriented Programming language.

University of East London - Object Oriented Programming in C#

The screenshot shows a Microsoft Word document with several lines of Visual Basic code. The code demonstrates different ways to print the string "Visual Basic is a programming language. It was developed by Microsoft." The first approach uses a single-line assignment. The second approach uses a concatenation operator (+). The third approach uses string interpolation (\$). The code also includes declarations for variables like 'firstString' and 'secondString'. The document has a yellow header bar with the title 'Evaluation of Visual Basic 5.0 as an Object-Oriented Programming language.' and a yellow footer bar with the text 'University of East London - Object Oriented Programming in C#'. A red arrow points to the 'DOWNLOAD FILE' button below the document.
