Hypertension: frequently a sign of endocrine diseases

A thorough history and physical exam, which can rule out concomitant medications, alcohol intake, and over-the-counter medication use, is an important prerequisite to the workup for endocrine causes of hypertension.

Correspondence (letter to the editor): Stress: Aspects of Endocrine Hypertension

It may also be caused by intake of corticosteroids like prednisone, dexamethasone and methylprednisolone for a long time. Primary aldosteronism can be insidious in its presentation since a supposed hallmark finding, hypokalemia, may be variable in its presentation. Frontiers reserves the right to guide an out-of-scope manuscript to a more suitable section or journal at any stage of peer review.

Endocrine causes of secondary hypertension

Hyperthyroidism or Hypothyroidism These disorders, if severe and untreated, can be associated with elevated blood pressure.

Stress: Aspects of Endocrine Hypertension

An increase in endocrine hypertension is to be expected with a global increase in insulin-resistant obesity few obese persons are insulin-sensitive! Patients with a pheochromocytoma may have episodic or sustained hypertension. Phaeochromocytomas and paragangliomas are rare neuro-endocrine tumours frequently associated with genetic abnormalities.

Endocrine Forms of Hypertension: Clinical and Emerging Molecular Aspects

Katharina Wenzel-Seifert Clinical Pharmacology, Clinic and Polyclinic for Psychiatry, Psychosomatics and Psychotherapy at the University of Regensburg Katharina.
