Gold: History and Genesis of Deposits

Beug KE 2004 Leitfaden der Pollenbestimmung für Mitteleuropa und angrenzende Gebiete.

EGRI Circulars 1975

This model is directly analogous to the genetic model we use to explain many Archean greenstone, slate-belt and other gold-only deposits Phillips and Powell, 1993, Phillips and Powell, 2010.

Paleo

A relationship has been established between morphological features and fineness of gold particles and the distance over which they have been transported in recent alluvial placer deposits, such as the rivers of the Barberton Mountain Land, South Africa and the river Rhine in Germany.

Gold : History and Genesis of Deposits by Robert W. Boyle (1987, Hardcover) for sale online

On the basis of the modern topography of the surrounding palaeobasin, it is probable that the open water area may have been as large as c.

gold

Edwards KJ 1982 Man, space and the woodland edge — speculations on the detection and interpretation of human impact in pollen profiles. AP falls to a minimum of 41%, primarily a result of a declining contribution from Quercus and Corylus, and to a lesser extent Fagus.

EGRI Circulars 1975

Treatise on Geochemistry, 2003, 7, 289-308. Also shown is the lithology, microscopic charcoal and total pollen concentration.

Gold : History and Genesis of Deposits by Robert W. Boyle (1987, Hardcover) for sale online

The Fe component in pyrophyllite is derived from pyrite, hematite, goethite, ferrihydrite, maghemite, and lepidocrocite.

Geochemical and morphological characteristics of gold particles from recent river deposits and the fossil placers of the Witwatersrand

One possible explanation may be that there are biases in the pollen assemblages from this time period. Doyen E, Vannière B, Berger J-F, Arnaud F, Tachikawa K, Bard E 2013 Land-use changes and environmental dynamics in the upper Rhone valley since Neolithic times inferred from sediments in Lac Moras.
