This approach also provides insight into the degradation processes and the changes that occur to the modelling clays over time. This article is cited by 200 publications. Modelling clays are utilised by artists for their malleable properties.

Raman vs. IR Spectroscopy

The solubilization of samples with buffered EDTA could not eliminate the minerals in coal. It was largely ignored following investigations in the late 1960s and Bergmann, 1967 but was rediscovered in 2006 as a means of rapid assay of.
