## **Lucilia cuprina**

Previous studies had been limited to only three of these breeds Angone, Bovine de Tete and Landim. The deepest divergence was estimated at only 800 generations, which appears to be an underestimate likely reflecting the influence of admixture.

## **Sheep 201: Breed Selection**

Results suggest that white and brown are co-dominant and both dominant to the other colors; white and spotted are the same variable; blackbelly behaves as a heterocigote; black is a possible homocigote recessive and independent to white.

## **Articles about Raising Barbados Blackbelly Sheep**

Fat-tailed or fat-rumped breeds make up about 25 percent of the world sheep population.

## **Dorper Sheep: Truths and Myths**

It is important to recognise that genome scans such as this, even when conducted using a meaningfully large number of loci and animals, have several limitations. Larvae are often found in shaded regions of carrion, while the adults prefer bright, open areas.
