## 4. The Introduction

Obviously, the first limiting step was the choice of research problem itself. In the scientific literature, abstracts must be stand-alone documents, whole and self-contained, because they are often published by themselves in research guides.

### Human Experimentation: An Introduction to the Ethical Issues

The introduction paragraph or paragraphs are usually placed at the beginning of the research paper.

### How to Write a Research Paper Introduction Paragraph

The Discussion section often begins by making a statement as to whether the findings in the Results support or do not support the expected findings stated in the hypothesis.

## 4. The Introduction

Write at least five to eight clear, concise sentences.

### An Introduction to Documentary Research

Integrity is a key After you created the final paper, be decisive to make necessary changes and correction especially before the submission. For example, instead of saying that X dollars are lost because of malaria every year, say that X dollars can be saved annually if malaria is prevented, or X millions litres of water can be saved by dispensing with irrigation, or X person-hours can be saved in the form of avoided illnesses because of improved air quality or reduced pollution. With the illustration, portray the reason behind choosing this research problem as your topic of investigation.
