

# Role of [beta]-catenin and E-cadherin in skin and gastrointestinal neoplasms

National Library of Canada - Concomitant neoplasms in the skin and stomach unveil the role of type IV collagen and E

Description:-

-role of [beta]-catenin and E-cadherin in skin and gastrointestinal neoplasms

-  
Canadian theses = -- Theses canadiennes role of [beta]-catenin and E-cadherin in skin and gastrointestinal neoplasms

Notes: Thesis (M.Sc.) -- University of Toronto, 2002.

$\beta$

In poorly differentiated tumors, AFP and  $\beta$ -hCG levels should be ordered. ER $\beta$  expression also causes changes in miRNA expression.

$\beta$

Digital rectal examination does not elevate PSA levels above normal values. Expression Analysis of CDH13 by qRT-PCR Using qRT-PCR, 18S rRNA expression was detected in all 52 pituitary adenomas and 5 normal tissues.

## Tumor

The number of cells that migrated or invaded was counted in five fields. Additionally, a similar conclusion was drawn in colon cancer therapy by Son et al. Levels exceeding 10 ng per mL are rarely due to benign disease.

## Induction by transforming growth factor

Pituitary adenomas constitute about 10—15% of intracranial neoplasms. Intuitively, a panel of tumor markers should help to establish the origin of the tumor.

## The role of alpha E beta 7 integrin (CD103) and E

. Combined AFP and  $\beta$ -hCG testing is an essential adjunct in the evaluation and treatment of nonseminomatous germ cell tumors, and in monitoring the response to therapy. We employed multiple widely used miRNA prediction programs including miRWalk , TargetScan , miRanda , miRTarBase and mirdb to excavate potential miRNAs that regulate NRP-1.

**β**

Signs and symptoms may be caused by multiple myeloma or other conditions. In pancreatic cancer tissues and cells, the expression level of NRP-1 was negatively correlated with that of miR-141.
