We'll go into a whole lot more detail about these later, but the thing to remember first, if you don't already remember it, is that arteries carry blood away from the heart and veins carry it back toward the heart. No other organ gets its own holiday, or as much radio play, and you're unlikely to get a love note decorated with a kidney, or a spleen, or even a brain, which is really what rules the emotions. All they have to do is diffuse across four layers of cell membranes to get from the lung cell into the blood.

Crash Course Respiratory System

It can plus save you a lot of money.

Crash Course Respiratory System

The tough outer layer, or the fibrous pericardium, is made of dense connective tissue and helps protect the heart while anchoring it to some of the surrounding structures, so that it doesn't, like, bounce all over the place while it's beating. Looking back, it was not ideal.

Facebook - Twitter - Tumblr - Support Crash Course on Patreon: CC Kids: Hank Green: Your heart, that throbbing, beating muscle -- it's probably the most iconic organ in your body. Considering how much we've talked about the importance of homeostasis, it should come as no surprise that blood pressure that's too high or too low or anything that affects your blood's ability to move oxygen around can be dangerous. For lots of animals, including humans, those lungs come with a bunch of other equipment, like protective ribs, a stiff trachea, and in mammals a strong diaphragm.
