Final Cut Pro

Earlier this year, it was reported that Apple was working on an iPad version of Final Cut Pro. Worse yet, most of these apps feel like they were designed by people who never edited video before.

Review Neat Video Plug-in for Final Cut Mac is a video noise reduction plug-in designed to reduce noise and grain in digital video sequences produced by digital video cameras, camcorders, TV-tuners, digitizers of film or analog video. The author examines Apple DV software applications, including QuickTime Pro, iMovie, iDVD, Final Cut Express, Final Cut Pro, DVD Studio Pro, and motion.

Add to this the fact that Apple handled the update inelegantly, and it was quite the firestorm. I'm trying to decide which one to learn to use, not for full length features and documentaries, but for creating short a few minutes professional quality works using video, stills, audio live recorded and voice over and text. You can also learn new Final Cut Pro editing techniques every Friday in with Nick Harauz and Jeff Greenberg.

Bottom line When it comes to editing video on an iOS device, LumaFusion has no equal. You have to really take the time to understand and embrace rather than fight how to use the Magnetic timeline but once you do it will allow you to edit much faster and facilitate your creativity more than any other editing program.

Final Cut Pro on the Mac App Store

Why wouldn't the same thing happen with Final Cut Pro? I haven't tried Premiere yet. If you are new to editing, I would strongly recommend you get a beginner version of software.
