Fire resistance of inorganic sawdust biocomposite

..

U.S. timber production, trade, consumption, and statistics, 1965

Grazing increased soil compaction to the 4-in depth, but using conventional surface tillage or deep tillage reduced compaction and increased soil water removal by cotton and peanut, compared to strict no-tillage. PCR trials in the lab indicated that the method discriminated the target segment of the pathogen in the host tissue in one day, compared to several days using other methods. Therefore, the environmental and economic factors will need to be considered carefully on a case-by-case basis before making these changes.

. As a part of this project, ARS conducted research on the economic performance of the demonstration farms in comparison to other farms in the region.

U.S. timber production, trade, consumption, and statistics 1965 to 2005

Lack of decision support tools for site-specific N management has led to little adoption of available precision agricultural technologies. These same nutrients can be sources of ground and surface water contamination. Internal parasites of sheep and goats are becoming resistant to chemical dewormers and organic producers cannot use chemical treatment.
