Sex and Gender Differences in Substance Use Disorder Treatment

Other pregnancy-related risks of substance abuse include a higher risk of miscarriage, low birth weight, birth defects, premature birth, sudden infant death syndrome, developmental delays, and cognitive and behavioral control problems. Calls to our general hotline may be answered by private treatment providers. With the use of these medications, although the baby still suffers from some withdrawal symptoms, the outcome is considerably improved.

Treatment & Services

Outpatient treatment services are also available to appropriate clients not having participated in a Progress Valley residential setting. The NGO AOD sector is the largest provider of residential rehabilitation services in NSW also referred to as residential treatment services.

[PDF] Books Treatment Services For Drug Dependent Women Free Download

Weekly health lectures focus on topics important to women in recovery. I want re-emphasize that she urgently needs help.

Women

What we do Our team provides you with safe and structured environment and the guidance of trained professionals, in order to support you in making positive life changes. Chapter Four describes the five roles of counselors who work with chemically dependent women. Successful treatment may need to provide an increased level of support to address these needs.

Women

Intensive outpatient treatment, which provides a higher treatment level than traditional outpatient programs but does not require structured residential living, has produced positive results for pregnant women.
