IS 12330: Specification for sulphate resisting Portland cement : Bureau of Indian Standards : Free Download, Borrow, and Streaming : Internet Archive

Sampling, conformity control and evaluation of conformity EN 1008:2002 Mixing water for concrete This standard specifies the requirements for water that is suitable for making concrete that conforms to EN206 and describes methods for assessing its suitability.

ASTM C150 / C150M

This type of cement is especially suited to improve the workability with a smaller water-cement ratio and to improve frost resistance of concrete. It includes Clay Bonded Refractory Castables, Cement Bonded Refractory Castables, Low Cement Bonded Refractory Castables and Phosphate-bonded Refractory Castables. Certain oxides are also themselves limited by specifications: For example, the magnesia MgO content which is limited to 6 percent maximum by weight for portland cements, because it can impact soundness at higher levels.

Nakhle Zgheib

When ordering concrete for construction projects, work with a local concrete producer to verify that cement meeting the requirements for the project environment and application is used, and one that meets the appropriate cement specification.

Nakhle Zgheib

For portland cement types, ASTM C150 describes: Cement Type Description Type I Normal Type II Moderate Sulfate Resistance Type II MH Moderate Heat of Hydration and Moderate Sulfate Resistance Type III High Early Strength Type IV Low Heat Hydration Type V High Sulfate Resistance For blended hydraulic cements — specified by ASTM C595 — the following nomenclature is used: Cement Type Description Type IL Portland-Limestone Cement Type IS Portland-Slag Cement Type IP Portland-Pozzolan Cement Type IT Ternary Blended Cement In addition, some blended cements have special performance properties verified by additional testing.

ASTM C150 / C150M

This standard is a Harmonised European Standard hEN. Our CSA Binder includes many types or grades.
