### History of Honey Bees Across America — Los Angeles County Beekeepers Association

All citizens have the same claim to participation in forming public opinion, and in the distribution, control, and exercise of political power. With that goal in mind, and with the technology to genetically modify food crops, huge corporations like Monsanto, along with their politicians firmly in their pockets, decide to patent every kind of food seed possible. Facundo and the Construction of Argentine Cultures, 1993.

### CHRISTIANITY: THE PENTECOSTAL FAMILY

Instead of massive bloodshed involving armed demonstrators million man occupation of the white house and the U.

### Barnabas Horton of Southold, Long Island, New York

Although purists tend to define the group narrowly, loose classifications of ethnic Gypsies include all nomads who live and identify themselves as Gypsies. Revolutionary Backlash: Women and Politics in the Early American Republic. The most high-profile convention was held in Richmond, Virginia, in June 1788, when Federalists like James Madison, Edmund Randolph, and John Marshall squared off against equally influential Anti-Federalists like Patrick Henry and George Mason.

Only minors younger than age 18 need parental consent to marry. They must start over, learning a new language, new customs, and new skills. Table 6 Treatment of Specific Upper Extremity Nerve Entrapment Injuries Nerve injury type Conservative therapy Therapy duration and considerations Indications for surgery Axillary — Shoulder range-of-motion exercises, including posterior capsule stretching; avoid heavy lifting For injuries associated with specific activity, assess shoulder biomechanics for that activity Consider baseline nerve conduction studies at one month, repeat at three months Conservative therapy for three to six months Rare Carpal tunnel, , , Activity modification, splints worn at night Consider one steroid injection Oral steroids, yoga, ultrasound, and carpal bone mobilization have short-term benefit Consider nerve conduction studies if no improvement within four to six weeks Common Consider surgery if nerve conduction studies show severe injury, thenar atrophy, motor weakness Cubital tunnel — Pad external elbow against external compression; decrease repetitive elbow flexion Extension splint 70 degrees

worn at night Conservative therapy only for sensory symptoms Occasional Consider surgery for motor weakness that is moderate or that does not respond to conservative therapy after three months Poor surgical outcome for established intrinsic muscle atrophy Interosseous nerve syndrome , Cock-up splint to assist weakened wrist muscles Avoid provocative activities Consider elbow immobilization Three to six months Consider surgery sooner if late presentation with severe weakness or atrophy, progressive weakness Long thoracic , Shoulder range-of-motion exercises to prevent contracture Strengthen trapezius, rhomboids, and levator scapula remaining scapular stabilizers Nine to 12 months is average recovery time; consider conservative treatment for up to 24 months Rare Pronator , , Activity modification; consider single steroid injection Splinting with elbow at 90 degrees can be used, with monitoring for loss of range of motion at elbow Three to six months Occasional Radial tunnel , , Physical therapy for extensor-supinator muscle group Consider single corticosteroid injection Three months of physical therapy before consideration of surgery unless intractable pain Consider surgical decompression for intractable pain, although no available evidence from randomized controlled trials Radial wrist , Eliminate external compression May consider single cortisone injection Three months Rare Suprascapular — Physical therapy to maintain full shoulder range of motion and strengthen other shoulder compensatory muscles Avoid heavy lifting and repetitive overhead activities Early magnetic resonance imaging at one month to rule out anatomic lesion i
