Moiré patterns facilitate discovery of novel insulating phases

Data mining can be conducted on any kind of data as long as the data are meaningful for a target application, such as database data, data warehouse data, transactional data, and advanced data types. Simultaneous pattern and data clustering for pattern cluster analysis. While applied first in the field of medical research, this technology can be used in virtually any industry, to uncover novel insights and transform research and business.

Approaches for Pattern Discovery Using Sequential Data Mining

These methods usually resolve conflicts based on the information on the entity level. For class prediction when class labels are given, we can discover the disentangled patterns associating with class labels from the training data.
