- - Building Construction Estimation Excel Sheet

The screenshot shows a Microsoft Excel spreadsheet with a title bar 'Building Construction Estimation'. The main table has columns for 'Description', 'Quantity', 'Unit', and 'Rate (\$/Unit)'. A yellow box highlights the first few rows of data. To the right of the table is a sidebar with several checkboxes labeled with construction terms like 'Excavate Next Cut', 'Excavate @ height of Previous Tensy', 'Tensy Excavation Below Max', 'Formwork 2 Loads', 'Rebar', 'Concrete', 'Steel', 'Pump', 'Haul', 'Crane', 'Pump Other \$2/Cu Yd', 'Pump Place in Concrete Truck', and 'Backfill'. At the bottom left, there's a note 'You charge these specs' followed by a list of items with their respective values.

For example, a time stream of costs and resurfacing projects for one pavement section is shown in Figure 5-11. There is some evidence that estimates of construction and operating costs have tended to persistently underestimate the actual costs. More powerful tools will come with multiple templates.

Consequently, cost estimation often represents an exercise in professional judgment instead of merely compiling a bill of quantities and collecting cost data to reach a total estimate mechanically. I like how you mentioned that an estimator needs good plans to work from and also must know how to read them. Rather than needing to be at your office or on a device with a connection to your company servers, you can connect via any device with a web connection.

Since the tradeoff between the capital cost and the operating cost is an essential part of the economic evaluation of a facility, the operating cost is viewed not as a separate entity, but as a part of the larger parcel of life cycle cost at the planning and design stage. Thanks so much for the encouragement.
