Friedrich Froebel, Founder of Kindergarten Essay

Friedrich Froebel was a German educator of the nineteenth century who developed an idealistic philosophy of early childhood education. He established kindergartens and influenced the development of early childhood education in Germany, France, and throughout the world. Friedrich Froebel was born in the small town of Oberweisbach, Germany in 1782. His mother died when he was a baby. His father remained, but Froebel never lied his mother. His many games and activities were influenced with love for his mother and a strong effect on his theory of early childhood education.

He believed the kindergarten teacher should be loving, kind and more. Froebel also believed that the teacher should be a good example to the children. He often encouraged them to be "introspective and socially interested" (Gutek, 2005, p. 24). Therefore, he wrote his "Kindergarten: Founder and Aim of Early Childhood Education and Education of Childhood" (Gutek, 2005, p. 24). One of the first Froebel works was "The Garden of the Five Senses". Froebel spent a lot of time playing in the garden around his home. This led to his love of nature.

When he was fifteen years old, Froebel apprenticed with a forester and surveyor and studied forestry, geometry and surveying in school. He briefly attended the University of Jena from 1806-1812. Then he studied architecture at Frankfurt University. Although he did not graduate, he did receive a degree in architecture. Froebel's love of symmetry and symmetry he later used to design his kindergarten "gifts" and "occupations". While in a Pestalozzi school, he studied the Pestalozzi method of instruction which emphasized using objects to teach.

His method rejected the use of corporal punishment and emphasized play. Froebel wanted to incorporate Pestalozzi's method and create a "loving and secure environment for children in his own teaching methods. After teaching on the streets, school, and Pestalozzi's school, he began to develop his own method of education.
