Purposeful, purposeful systems, Classification of systems by complexity

Although the ARM release do not support all the applications, most essential applications have been ported for the ARM architecture. FreeBSD is an operating system built to power anything from servers and desktop computers to IoT devices and cloud technologies. In the search for a classification that would help in the initial stages of modeling to determine which class of systems is more in line with the simulated situation, a classification was proposed in which an attempt is made to link the choice of modeling methods to all classes of systems.
